

C# Outlier Detection Program (Basic Style)

```
using System;

class Program
{
    static void Main()
    {
        int[] data = {115,182,191,31,196,1099,5,172,10,179,83,21,20,21,186,177,195,193,188,199,62,1099};
        int n = data.Length;

        // sort
        for (int i = 0; i < n; i++)
        {
            for (int j = i + 1; j < n; j++)
            {
                if (data[i] > data[j])
                {
                    int temp = data[i];
                    data[i] = data[j];
                    data[j] = temp;
                }
            }
        }

        // quartiles
        double Q1 = data[n / 4];
        double Q2 = data[n / 2];
        double Q3 = data[(3 * n) / 4];

        double IQR = Q3 - Q1;

        double lower = Q1 - 1.5 * IQR;
        double upper = Q3 + 1.5 * IQR;

        Console.WriteLine("Outliers:");
        for (int i = 0; i < n; i++)
        {
            if (data[i] < lower || data[i] > upper)
            {
                Console.WriteLine(data[i]);
            }
        }
    }
}
```
